**Further information on the Symphony Environmental Technologies Group of companies:**

SYMPHONY ENVIRONMENTAL TECHNOLOGIES PLC is a specialist in controlled-life plastic technology and products - a system that works by a process called oxo-biodegradation. The technology is branded d2w® and appears as a droplet logo on many thousands of tonnes of plastic packaging and other plastic products.

Symphony's d2w® technology turns plastic at the end of its service-life into a material with a completely different molecular structure. At that stage it is no longer a plastic and can be bioassimilated in the open environment in the same way as a leaf.

For a video of d2w® plastic degrading see -<http://degradable.net/play-videos/4>

Symphony has a diverse and growing customer-base and has established itself successfully as an international business. Products made with d2w® plastic technology can now be found in more than 90 countries around the world and in many different product applications. Symphony is a member of the Oxo-biodegradable Plastics Association ([www.biodeg.org](http://www.biodeg.org)), the Society for the Chemical Industry (UK), and The British Plastics Federation (BPF). Symphony is also a member of the European Organisation for Packaging & the Environment (Europen) and the British Brands Group. Symphony actively participates in the Committee work of the British Standards Institute (BSI), the European Standards Organisation (CEN), the American Standards Organisation (ASTM). and the International Standards Organisation (ISO)

Symphony also owns the trademark d2p for an anti-microbial technology that can be used in most types of plastic products to help protect against infection. Symphony is also developing innovative and cost-effective waste-to-value technology to convert scrap tyres and other waste-streams into valuable products.

Further information on the Symphony Group can be found at [www.d2w.net](http://www.d2w.net).
